DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsushita (JP 05-069182 A, IDS).

Matsushita teaches a method of soldering an electronic device comprising the steps of printing a cream solder on a contact on a circuit substrate having a metal terminal (2) on the back surface and performing solder joining via laser (figure 3 and abstract). It is noted that an identical structure can be formed by other methods including but not limited to oven and vapor phase reflow of preformed solder balls.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Takanashi et al. (USPN 5842627).

Takanashi teaches a method of soldering an electronic device comprising the steps of printing a cream solder on a contact on a circuit substrate having a metal terminal (52) on the back surface, performing solder joining via laser and supplying cold air to the surface such that the surface reaches a prescribed temperature (figures 9 and 12, col 3 line 56 – col 7 line 16, col 4 line 60 – col 5 line 7 and col 7 lines 5-37). It is

noted that an identical structure can be formed by other methods including but not limited to oven and vapor phase reflow of preformed solder balls.
